

HiArc 100 Static Table Based Systems

Bauromat offer a range of mig, tig and plasma static tables robotic welding cells. These cells are designed for welding small components where manipulation during the process is not required.

Because the cells have two stations, piece parts logistics are easier to control when welding a variety of components.

Special Features

- Cells in Flat front or angled front designs (45 or 90 degree angles).
- Choice of Robot brand.
- Choice of welding packages.
- Modular guarding with choice of operator protection systems of manual or powered doors or electric roller door.
- Options on control systems.
- Pallet based systems to minimise installation time.
- Various cell sizes based on tool. working areas from 800 x 600 tables up to 1500 x 1000 tables for easier loading.

For more details contact us or visit our website

All robots cells can be supplied with or without tooling
