

HiArc 200 Turntable Based Systems

Bauromat offer a range of mig, tig and plasma turntable robot welding cells, these cells are designed for high volume productions and are flexible to cater for all customers requirements.

The turntable can be fitted with servo manipulators at each side if manipulation is required during the welding process.

This cell design gives high efficiency for the capital investment.

Special Features

- Manual, semi auto or powered systems.
- Choice of Robot brand.
- Choice of welding packages.
- Modular guarding with choice of operator protection systems.
- Multi robot systems.
- Options on control systems. Robot control or PLC with HMI Pallet based systems to minimise installation time.
- High repeatability turntable ≤ 0.1 mm.
- Swing diameters 1500 mm up to 3000 mm diameter 75 kg up to 2000 kg.
- Modular external positioning systems available to add more access.
- Pallet based on systems up to 2800 mm wide.
- Quick change tooling plates on machine locations.
- For positioner details see Kyrus T and TS data sheets.

Also available with our unique semi auto system
